

Pedors® - Comfort Is No Mean Feet™

Since 1997 Pedors Shoes have been designing “*Fantastically Functional Footwear*” and is recognized as the leading shoe brand for seniors with special foot care needs.

The main feature of Pedors shoes is an upper made from a proprietary blend of neoprene and EVA called Pedoprene™.

Pedoprene™ stretches to accommodate forefoot deformities and also gives some compression to help reduce edema.

Further, Pedoprene has the remarkable property of being a four-way stretch material that is also heat-moldable.

Pedors® - Comfort Is No Mean Feet™

Pedors are primarily worn by people suffering from swollen feet, edema, lymphedema, diabetes, arthritis, CMT, bunions, hammertoes and corns.

Finding shoes that have enough volume inside the shoe for swelling or to accommodate an orthopedic or therapeutic device is a main reason why people turn to Pedors.

The increase in the incidence of phlebologic and lymphologic diseases such as varicosis, thrombophlebitis, phelbothrombosis, chronic venous insufficiency, primary and secondary lymphedema has resulted in increased demand.

Pedors® - Comfort Is No Mean Feet™

For people wearing a bandage, a wrap, a sleeve, a pad, an orthotic or even a brace, the key for getting the right fit is to get the right width in a shoe. Often the width is determined by how much girth is required which is dictated by the amount of swelling in the foot - or the amount of additional girth that is required to accommodate the device being worn or used in the shoe.

A common mistake is for people to buy shoes in a retail store that are much longer in length than needed in the belief that by doing so, the shoe will become more voluminous and provide more accommodation. This results in ill-fitting shoes and increases the risk of tripping, fall and injury and can also lead to other issues related to ill-fitting footwear.

Pedors® - Comfort Is No Mean Feet™

The Top 10 Things To Look For When Fitting Shoes With Lower Extremity Orthopedic & Therapeutic Devices

- 1) When looking for shoes to accommodate a device, go wider rather than longer.
- 2) When measuring for size, take a tracing with the device in place.
- 3) Evaluate if the shoe can be easily adjusted for fit with a touch closure and or/ with additional spacers in the shoes.
- 4) Consider the weight of the shoe and the person wearing the shoe. The larger the person the more support will be required in the shoe. The lighter the person the lighter the shoe needs to be so gait is not compromised.
- 5) Ensure the shoe is comfortable on the foot when worn with the device. If it's not, neither the shoe nor the device will be worn and can't do any good in the closet.
- 6) If fall risk is a concern, evaluate the design features in the shoe to minimize tripping.
- 7) Function over aesthetics. Don't compromise on functionality because of how a shoe might look. Most orthopedic and therapeutic shoes only become a thing of beauty once they are on the foot and the person is mobile again.
- 8) Comfort = Patient Compliance
- 9) Compliance = Increased Mobility
- 10) Increased Mobility = Improved Quality Of Life & Longevity.

Pedors® - Comfort Is No Mean Feet™

Removable Insole
Orthotic Friendly

Pedoprene™ Stretch Upper
Great for diabetes,
bunions, hammertoes,
arthritis

Super Light-Weight
EVA Sole and canvas heel provide for a super light-weight shoe.

Medium width.
Great for corns, bunions,
crossed-toes, hammertoes.

Pedors® - Comfort Is No Mean Feet™

As a clinician, I like working with Pedors because the shoe provides appropriate pressure relief for residents with compromised skin. I believe our residents like wearing Pedors because they are comfortable and lightweight.

Bill B, PT

Pedors provides a reasonable price and a material that works well for some of our more complicated foot structures and gait pattern at this long term care facility. They are very forgiving and minimize excessive pressure on the high risk areas of the feet.

RDM, PT, DPT

I initially was introduced to Pedors when I was working at an Assisted Living Facility years ago. The client was diabetic and the podiatrist recommended them. They worked out very well, washable, sturdy, easy to get on and off, etc. Price point and selection are good. Everyone orders on-line and I have had not problems with delivery, etc. I am in a position working with elderly, dementia residents, etc., and this is the product I recommend and purchase.

DM, Case Manager

We like working with Pedors because we can pay by check or credit card depending on the situation. Our residents like wearing Pedors because the footwear accommodates many foot problems, they're lightweight, they clean easily, and come in a variety of colors.

DOS

Pedors® - Comfort Is No Mean Feet™

6 Pack Takeaways:

1. Accommodative, Comfortable & Lightweight. Full and half sizes and five widths.
2. Easy to put on and take off. Velcro closure no laces, great patient compliance.
3. Proprietary Pedoprene material stretches and gives some compression for swollen feet.
4. Ambulation is a key indicator for quality of life, independence, longevity, health and wellness.
5. Appropriate footwear is critical for minimizing fall risk and reducing hospitalization incidence.
6. Pedors is the #1 shoe company for seniors living with foot issues.
